

## GIM - Smart geo insights – .NET Developer

### Job description

As a .NET Developer, you work on the core of the MarlinDT product. The MarlinDT product team is small and focused: it is building the next generation of GIS asset inventory. That means your code will be around for a long time. Of course, we already have customers using the product, and you will need to take that into account: no quick & dirty solutions, but also not over-engineering things. It's a challenging balance – and we will support you in finding it.

We work in an Agile/Scrum environment where everyone contributes ideas and supports each other in tackling sometimes very complex challenges. We organise code reviews so that everyone can learn from one another and help build a well-structured, coherent codebase.

#### Marlin Digital Twin

*Marlin Digital Twin is bringing a real revolution to network operators in how they manage, engineer and operate their networks. The key to success, in our view, is a true single source of truth: how do you ensure that everyone in the organisation sees the same network reality? Our Digital Twin is designed to make exactly that possible.*

*Today, MarlinDT already has its first customers, and we are ready to scale – in the Netherlands and internationally. MarlinDT operates as a start-up within Merkator: a strong team, a solid customer base and big ambitions.*

*MarlinDT offers a geographical inventory based on the Esri foundation (ArcGIS Pro, Utility Network, ArcGIS Enterprise) combined with a logical inventory.*

*We are looking for strong profiles who can help us take MarlinDT to the next level.*

### Your profile

- You have at least 2 years of experience as a .NET Developer
- C#, , web services, WPF, ... hold few secrets for you
- You score bonus points with Esri expertise and/or domain knowledge (fiber, coax, copper, ...)
- You want to make an impact in a product team that aims to conquer the GIS/Utility world
- You are eager to grow and explore new technologies
- You are not afraid to learn the above if you do not yet have all the required experience
- You enjoy working in a self-managing scrum team where communication is key

### What do we offer you

- Merkator is one happy professional family. We are a growing company that puts people first and offers plenty of opportunities to develop yourself.
- When it comes to working from home, we have one rule: there is no rule. We work from home and meet

regularly at the office or at the customer's site – and we will keep this flexibility in the future.

- Merkator offers a competitive salary package including a company car, public transport allowance, smartphone, laptop, meal vouchers, group insurance, hospitalisation insurance, ...
- When the weather is good, we're not afraid to fire up the BBQ at lunchtime. We organise fun team-building activities, and many colleagues go running, cycling or playing padel together.
